

Spiderman Mulholland with U S Building Consultants, Inc. secures a 1500 SF laboratory to devote to Chinese and other defective drywall testing

Gainesville, Fla. - A leading forensic expert on building envelope, water intrusion, toxic mold, and Chinese drywall, Spiderman S. Mulholland, Senior Forensic investigator and national consultant with [U S Building Consultants](#) and [U S Building Laboratories Inc.](#), is setting up a 1,500 square foot laboratory to devote to Chinese and other defective drywall testing.

Our team will be working in conjunction with the University of Florida and the professionals at Analytical Research Systems (ARS, Inc.) from Gainesville, Florida. The professionals at ARS, Inc. have cutting edge science capabilities and a great deal of passion like we do for developing solutions. They think out-of-the box and there is a lot of exciting research we will be working on.

We could be one of the partnered companies responsible for helping solve the biggest environmental disaster in the U.S. housing industry.

People need real viable solutions, backed by good science with solid controls. People are desperate for answers and we have many of them today. The remediation protocols are complex and will involve a multi-stage program that will be presented to Congressmen Wexler and Senator Nelson, who we feel have been leading the charge for the people of Florida. We are also in communication with the Florida Task Force director.

USBCI has an accredited testing facility that can determine toxic-drywall problems. Mulholland inspects, consults and has been retained as an expert in Chinese drywall cases.
