**TO WHOM IT MAY CONCERN**

For approximately 10 years Spiderman's Inc., has had an ongoing waterproofing leak hunting and window cleaning contract that supplies services to our 32 story First National Bank, Mobile, Alabama building.

Spiderman's Inc., has been on call and has quickly responded over the years to many water leak problems we had. We could always depend on their services along with special reporting by their ITA Systems Division. Spiderman personally has rappelled our building and taken photographs and performed testing and analysis for our insurance company to help solve problems. In 1999 Spiderman's conducted a forensic analysis and designed a system to waterproof the building by overlaying the existing 28 year old build-up of sealant in the expansion joints. A 123 Dow Corning system was designed and Spiderman's was hired to completely reseal all precast 9 x 12 panels in the Tower.

Spiderman ' s spent 10 months restoring our waterproofing on the building with no mishaps. Today after several storms, we have had no leaks. Your design of overlaying our old sealant saved over \$100,000 *dollars* and your expert workmanship in applying the sealant has given us a leak -free building and a better aesthetic appeal. Your professionalism and demand for quality services extends throughout your staff. We appreciate these qualities in a business and we will continue to use your many services in the future. In my opinion, you provided us with real ways of stopping our water leak problems.

Respectfully,

JOHN TOOMEY & COMPANY, INC

John E. Toomey, III  
President
